Eccles Speaks  
At War College

Rear Adm. Henry E. Eccles, USN (ret.), of 101 Washington St. delivered the keynote lecture at the Naval College yesterday for the beginning of a logistic study by command and staff students.

Admiral Eccles, who is conducting a logistics research project at George Washington University, covered the basis theory and principles of logistics as they apply at all levels of command. He emphasized operational logistics planning, normally performed at the fleet area commander level.

Later, Dr. Donald F. Chamberlain, of the Central Intelligence Agency, spoke to Naval Warfare students in Pringle Auditorium on Soviet scientific achievements.

The assistant director of scientific intelligence appraised scientific research and engineering development in the USSR. He also analyzed the effort and support the Soviet Union gives to various scientific fields.

Following the lectures, both were luncheon guests of Rear Adm. Francis E. Nuessle, college chief of staff.

Other guest lecturers this week are Cmdr. Richard Watson of the Supreme Allied Command, Atlantic, in Norfolk, Va., who spoke today.

He discussed SACLANT logistic organization and functions and spoke of projected plans, policies and doctrines for the logistic support of Allied command forces in war, as well as present and anticipated problems in support of these forces.

On Thursday Adm. David L. McDonald, chief of naval operations, and Capt. John R. Mayher, from the office of Naval operations, will lecture. Friday the speakers will be John Maddox of the United States Information Agency and Cmdr. R. L. Severns of the Fleet Air Quonset staff.
